

the naked jumbo pod

benefits

The pod combines the comfort properties of the well-loved beanbag in an industrial strength plastic frame. This combination creates a number of practical benefits as, not only is the pod extremely comfortable and durable, it is also incredibly easy to clean as the plastic frame can be simply washed or hosed down. Furthermore the beanbag has an internal bag, (that holds the poly-beads), which allows the outer cover to be easily removed and laundered.

The plastic frame gives the option of using the pod either indoors and outside.

unique feature

Permanent graphics can be applied to the plastic cradle making the pod ideal for school, sports, corporate or promotional branding.

construction

The cradle is manufactured from high density polyethylene and a drainage system is incorporated into the base to ease cleaning as well as allowing the pod to be used outdoors.

The beanbag consists of an outer cover and an inner bag that contains the poly-beads. Both are manufactured to exacting specifications.

The wooden feet are attached to metal plates that are bolted onto the base of the cradle.

All our pods are manufactured in North Carolina.

colour and fabric options

The cradle can be manufactured in plain colours or in a wide variety of granite effect finishes (as shown). We can produce the granite finish in any desired colourway - please contact us for further information.

The beanbag can be manufactured in any fabric the customer supplies or specifies. We offer a contract specification micro-velvet as our standard beanbag fabric.

dimensions

Width 50" x Depth 50" x Height 35".
