

the upholstered beanbag pod

benefits

The pod combines the comfort properties of the well-loved beanbag in an industrial strength plastic frame. This combination creates a piece of furniture that is extremely comfortable and durable. The cradle can be upholstered in a variety of hard-wearing easycare materials and the beanbag has an internal bag, (that holds the poly-beads), which allows the outer cover to be removed and easily laundered.

construction

The cradle is manufactured from high density re-cycled polyethylene and this creates a solid frame that can be easily upholstered.

The beanbag consists of an outer cover and an inner bag that contains the poly-beads. Both are manufactured to exacting specifications.

The wooden feet are attached to metal plates that are bolted onto the base of the cradle.

All of our pods are manufactured in North Carolina.

colour and fabric options

It is really up to the designer, specifier or home-owner to create the pod they want. We offer a blank canvas and we leave the rest up to the customer. Alternatively we offer a selection of leathers and micro-velvet fabrics that we offer as "standards".

dimensions

Width 40" x Depth 40" x Height 28".
